Our Promise

Valencia Hardwoods brings you the benefit of Old World craftsmanship through validation from craftsmen with over forty years of continuous specific hardwood flooring product and installation experience. Valencia Hardwoods will only offer products of the highest quality, embracing the latest in technology and market trends, as selected by our team of experienced hardwood and flooring design experts.

We Believe

Every company is responsible to a universal obligation of ethical environmental practices. Wood that is not just renewable, but when accompanied by managed forestry practices... indefinitely sustainable.

SUPERIOR ENGINEERED HARDWOOD

- We produce wider boards at 7.5" and 9.5" up to 11". Our material has far greater stability in a range of climates from the mountains of Colorado to the beaches in Florida.

Top Layer UV Coat with Matte Finish

Reactive Staining Techniques Penetrate the Full 3.2mm Wear Layer

Havea Hardwood Core with Thermal Expansion Slots

Softwood Back

- Havea shares the same density and strength as White Oak and outperforms plywood or softwood core material.

REACTIVE STAIN PROCESS

Euro Sawn Planks

- Cutting through the center of the log reveals the rift and cathedral grain structure.
- Reactive stain processes interact with the tannins of the wood, penetrating the full 3.2mm wear layer.

SAFETY CERTIFICATIONS

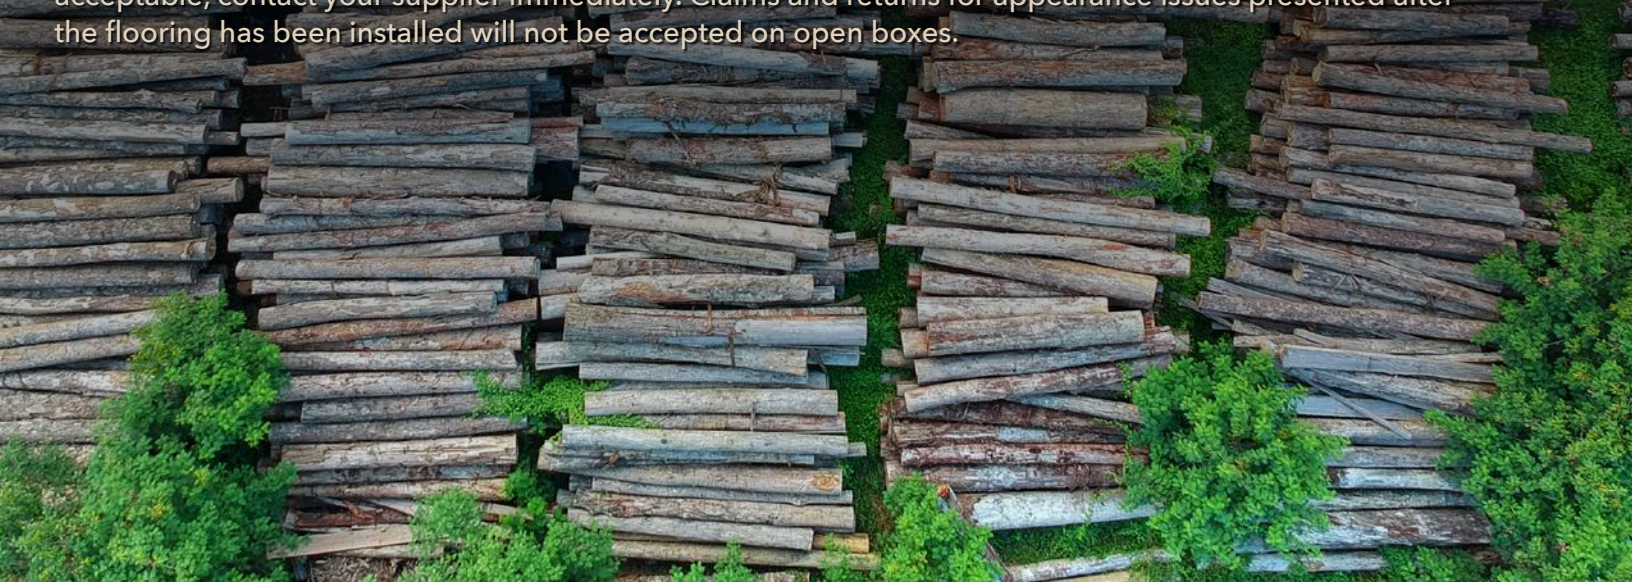

- Valencia Hardwoods products contain **ZERO** formaldehyde or chemicals that can off gas and be harmful to children and pets.
- Our engineered hardwood flooring meets or exceeds safety certifications for some of the most stringent countries in the world.

High Color Variation

Wood is a natural product subject to variations in grain, color, and character. This product may contain naturally occurring knots, splits, cracks, mineral streaks and other imperfections that are not considered defects of the hardwood floor and instead are simply a part of the character of the natural wood product. Our wood flooring is prepared using tannin reactive techniques, smoking, and other finishing processes to highlight the natural beauty of the hardwood floor. These techniques may increase the natural color, variation or initiate color change that evolves over time. All wood is composed of organic material with variation from tree to tree and board to board thus there can be no guarantee that the wood you order will exactly match this sample. So, we encourage you to inspect your flooring material carefully before installation to make sure the product you receive is acceptable. If you notice something that is not acceptable, contact your supplier immediately. Claims and returns for appearance issues presented after the flooring has been installed will not be accepted on open boxes.

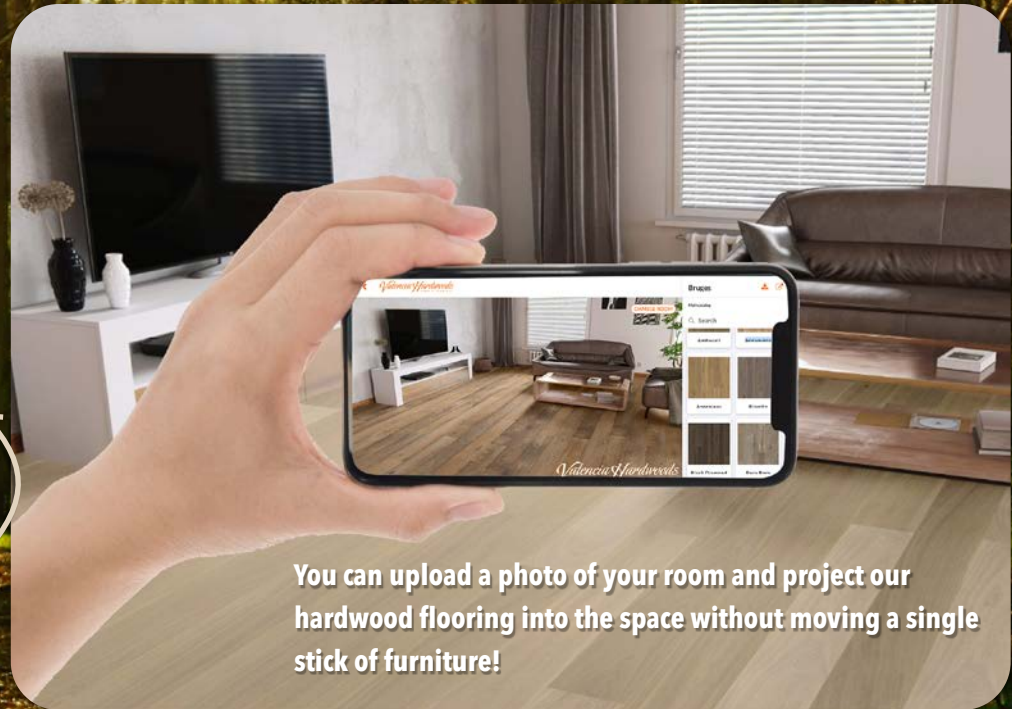

Floor Visualizer Tool

Maintenance & Care

In alignment with our high standards concerning human health and environmental well-being, Valencia offers an alternative to the cleaners usually associated with the finishes we use. There is no need to use a harsh cleaning solution. Instead, the simple, inexpensive, and sustainable combination of white vinegar and distilled water will work magic, leaving your floors spic, span, and sparkling. Additionally, this non-abrasive solution will add to the longevity of your floors without contributing to the toxin and chemical load already found in our living spaces.

1 part white vinegar + 7 parts distilled* water
Mix and use as with any other cleaner.

**Distilled water is essential, as it has been removed of any impurities that may harm or discolor the wood.*

For more information on the care and maintenance of wood floors, the National Wood Flooring Association website provides helpful detailed and technical guidelines.
